

Ecoorganic at AGRO 2017

Scientific - production company "Ecoorganic" took part in the XXIX International Agricultural Exhibition AGRO 2017 from June 7 to June 10, 2017.

We were pleasantly surprised by the number of visitors to the "Ecoorganic" booth. The specialists of the company constantly rendered consultations to agrarians and distributors about the peculiarities of using fertilizers for foliar feeding of the "Ecoline" line, told about their advantages, and presented new products of the innovative "GROS" product line.

It was very pleasant to hear positive feedback from agricultural producers who used these products and were able to successfully solve the problems, both on crops of cereals and industrial crops.

Even more positive emotions were aroused by the interest of visitors who first got acquainted with the products of "Ecoorganic", although most of them heard about these fertilizers and came to the stand to get information about the distribution network in their region or with the desire to establish cooperation.

Of course, it is impossible to provide full information about the properties, advantages and real results of using the products of the company "Ecoorganic" during the short communication at the exhibition, therefore we invite you to visit the demonstration and experimental fields where the system of foliar nutrition by the products of the line "Ecoline" and "Gros" is used. The map of such fields with the location of demonstration places, test cultures, partners with which these experiments are conducted and the approximate dates of the Field Days can be found on the main page of our site.

We will be happy to see at our events all those who wish to adopt experience and to be convinced of the effectiveness of the technologies and products of the company "Ecoorganic".
